

AVIOALB
SERVICES

DISINFECTION SERVICES

Who we are:

Following the declaration of the outbreak of novel coronavirus disease (COVID-19) as pandemic, EASA through the issued Safety Directive 2020/03 and 2020/04, has requested cleaning and disinfection of aircraft involved in commercial air transportation of passengers.

In these unprecedented times impacted by COVID-19, Avioalb Services, a reliable partner for ticketing, supervision and other industry related services, is responding to the current global pandemic by introducing groundbreaking disinfection services for airlines operating in Tirana International Airport. Licensed to perform DDD services (disinfection, disinsection, deodorization) Avioalb Services performs disinfection under the surveillance of technical director and issues a valid certificate for 24 hours.

What we use:

1. Broad Spectrum Disinfectant Cleaner

Netbiokem DSAM is a ready to use broad spectrum virucidal, fungicidal, bactericidal and mycobactericidal disinfectant cleaner for all surfaces of the aircraft. It will not harm or damage fabrics, plastic, metals, rubber or other surfaces. This disinfectant has been approved from:

- AIRBUS CML-14-006C, CML 12-012A,
- AMS 1526, AMS 1452, AMS 1453, Boeing D6-7127M
- CFM 56 – CP2712

2. Fogging machine

The machine is used for the decontamination of surfaces by air. This innovative technology provides 100% wrap-around coverage to ensure every part of every surface is being treated.

3. Classic portable sprayers or airless sprayers

We are able to provide portable sprayers or airless sprayers depending on the airline request.
